1 Start with a double line, simple, symmetrical shape for the stamp border. A square or circle is best.

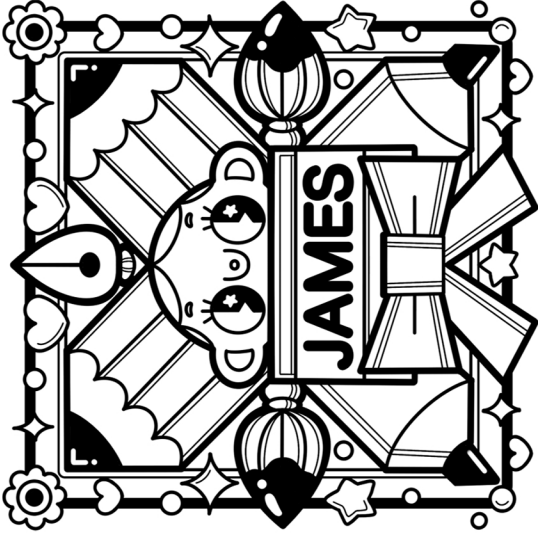

2 Place a text block and a circle (head) to note where your character will be. It helps to keep them in the center.

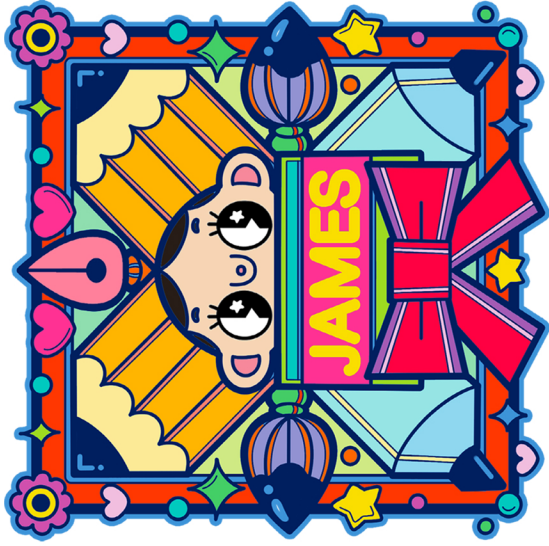

3 Using your grid, place your large scale decorative motifs around the character and text block

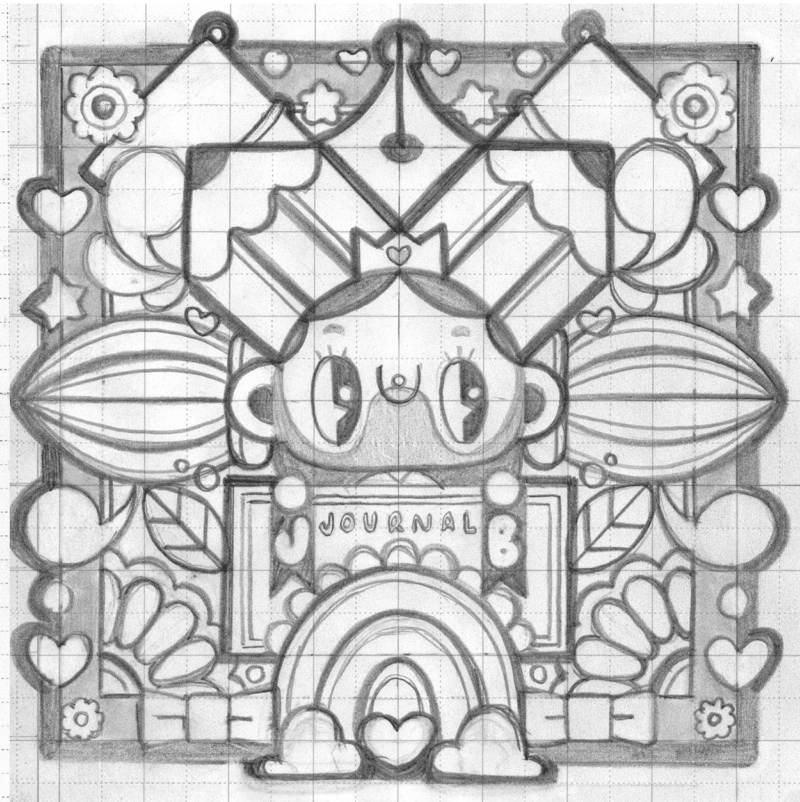

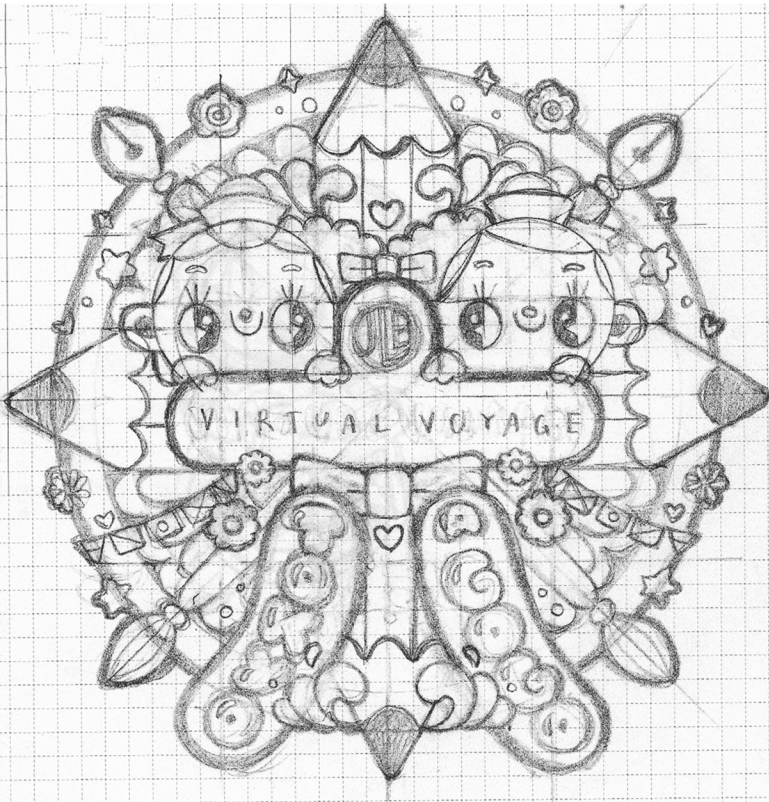

4 Clean up your sketch as you go, add your text and fill your negative spaces with a sprinkle of tiny decora.

5 Add your solid fills and highlights, as well as a thin double line detail to the decorative elements.

6 Color it in if you wish and you're done - You have your very own super retro kawaii rally stamp!

A selection of my rally stamp designs. Top left is the logo design for VV6. Top right is a more detailed version of the rally stamp designed in this lesson. Both bottom designs were versions created for a real rubber stamp I had made for my in-person Journal Meetups.
